Patent No. 5935573
GENERAL INFORMATION:
APPLICANT: LOOSMONE, Sheena M
APPLICANT: ANG, Yan-Ping
APPLICANT: CHONG, Pele
APPLICANT: CHONG, Pele
APPLICANT: KLEIN, Michel H.
TITLE OF INVENTION: Analog of Haemophilus Hin47 Protein with Reduced Protease A
NUMBER OF SEQUENCES: 23
CORRESPONDENCE ADDRESS:

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
The present sequence represents a Helicobacter pylori antigenic protein that is characterised by immunoreactivity with H. pylori-positive antisera. The proteins are highly immunogenic and induce a long-lasting immune response that persists even after antimicriobial treatment. In antibody-detection assays, on sera, plasma, urine, saliva etc., they are highly sensitive and specific. The specification also describes 69 previously unrecognised immunogenic cluster families. H. pylori antigens are used to detect H. pylori-specific antibodies, for diagnosing infection or to confirm eradication of infection, and in vaccines to protect against H. pylori infection and related diseases (gastritis, peptic ulcer, gastric adenocarcinoma/lymphoma).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    57 MIPKERMERALGSGVIISKDGYIVTNNHVIDGADKIKVTIPGSNKEYSATLVGTDSESDL 116

                                                                                                         This sequence represents a Helicobacter pylori GHPO protein of the invention. The polypeptides can be used for preventing or treating Helicobacter infections, and gastroduodenal diseases associated with these infections, including acute, chronic, and atrophic gastritis, and peptic ulcer diseases, e.g. gastric and duodenal ulcers. They can also be used for the production of antibodies. The products can also be used for detection and diagnosis.

The present sequence represents a Helicobacter pylori antigenic protein that is character/sed by immunoreactivity with H. pylori-positive antisera. The proteins are highly immunogenic and induce a long-lasting immune response that persists even after antimicriobial treatment. In antibody-detection assays, on sera, plasma, urine, saliva etc., they are highly sensitive wind specific. The specification also describes 69 previously unrecognised immunogenic cluster families. H. pylori antigens are used to detect H. pylori-specific antibodies, for diagnosing infection or to confirm eradication of infection, and in vaccines to protect against H. pylori infection and related diseases (gastritis, peptic ulcer, gastrit adenocarcinoma/lymphoma).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Helicobacter pylori antigens and related nucleic acid sequences seful in serological diagnosis and protective vaccines, providing

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence represents a Helicobacter pylori antigenic protein that is characterised by immunoreactivity with H. pylori-positive antisers. The proteins are highly immunogenic and induce a long-lasting immune response that persists even after antimicriobial treatment. In antibody-detection assays, on sera, plasma, urine, sallva etc., they are highly sensitive and specific. The specification also describes 69 previously unrecognised immunogenic cluster families. H. pylori antigens are used to detect H. pylori-specific antibodies, for diagnosing infection or to confirm eradication of infection, and in vaccines to protect against H. pylori infection and related diseases (gastritis,

AAX36754-Y37949 are encoded by open reading frames (ORFs) of the genome of Chlamydia trachomatis (see AAZ01425). The polypeptides can be used as vaccines against Chlamydia trachomatis. Antisense and ribozyme sequences can also be used to control growth of the microorganism. Chlamydia trachomatis is responsible for a large number of diseases, e.g. eye diseases such as conventional trachoma, nonendemic trachoma, paratrachoma, and inclusion conjunctivitis; genital diseases such as nongonococcal uretritis, epidymitis, cervicitis, salpingitis, and venereal lymphogranulomatosis. The polypeptides of the invention may be of use in treating these diseases.
                                                                                                                                                           Vaccine; eye disease; conventional trachoma; nonendemic trachoma; paratrachoma; inclusion conjunctivitis; genital disease; perihepatitis; nongonococcal uretritis; epidymitis; cervicitis; salpingitis; bartholinitis; pneumopathy; venereal lymphogranulomatosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  IRITKDNLPTIKFSDSNDISVGDLVFAIGNPFGVGESVTQGIVSALNKSGIGINSYENFI 122

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence represents a Helicobacter pylori antigenic protein that is characterised by immunoreactivity with H. pylori-positive antisers. The proteins are highly immunogenic and induce a long-lasting immuno response that persists even after antimicriobial treatment. In antibody-detection assays, on sera, plasma, urine, saliva etc., they highly sensitive and specific. The specification also describes 69 previously unrecognised immunogenic cluster families. H. pylori antigens are used to detect H. pylori-specific antibodies, for diagnosing infection or to confirm eradication of infection, and in vaccines to protect against H. pylori infection and related diseases (gastritis,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequences ABB90526-ABB90715 represent novel proteins from Chlamydia pneumoniae (strain CWL029), and ABL91184-ABL91373 represent DNA encoding them. The proteins are predicted to be immunogenic and may therefore be useful in vaccine production and for diagnostic purposes. Chlamydia pneumoniae is a common cause of respiratory disease in humans, and is also involved in the development of cardiovascular diseases such as atherosclerosis, coronary artery disease, carcolid artery stenosis, myocardial infarction, cerebrovascular disease, aortic aneurysm, claudication and stroke. The proteins and nucleic acids of the invention may be used in vaccines and pharmaceutical compositions for the prevention or treatment of chlamydial infections, particularly Chlamydia pneumoniae infections. The proteins may also be used in the detection of

                                                                                                             TriphoA mutagenesis was used in the mouse virulent S. typhimurium strain CS. Mutants were selected likely to harbour lesions in genes that have a signal peptide sequence, i.e. proteins likely to be targetted through a bacterial membrane. Isolation of the DNA flanking the TriphoA insertion identified the gene (hrA) that has been insertionally activated. Comparison of the translated protein sequence showed that it shared 88% homology with the sequence of the htrA product from E. coli.

                                                                                                                                                                             The present invention provides isolated polynucleotides encoding HtrA, PODA, HypC, LysS, YefW, ABC1 or Omp100 protein of Lawsonia intracellularis. The sequences can be used in vaccines for the prevention of Lawsonia intracellularis infection. The present sequence is a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             BASB011; immune response; bacterial infection; middle ear infection;

The polypeptide is used to generate an immune response in an animal, particularly against a bacterial infection, e.g. a Moraxella catarrhalis infection. M. catarrhalis is present in 15% of childhood middle ear infections in the US. Molecules of the invention may also be used to prevent adhesion of bacteria to extracellular matrix proteins on inwounds, to block bacterial adhesion between extracellular matrix proteins and BASB011 proteins that mediate tissue damage, or to block the normal progression of pathogenesis in infections initiated other than by implanting of indwelling devices or by other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         BASB011; immune response; bacterial infection; middle ear infection;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9910-EP02764
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (first entry)
```

```
The polypeptide is used to generate an immune response in an animal, particularly against a bacterial infection, e.g. a Moraxella catarrhalis infection. M. catarrhalis is present in 15% of childhood middle ear infections in the US. Molecules of the invention may also be used to prevent adhesion of bacteria to extracellular matrix proteins on inducibiling devices or in wounds, to block bacterial adhesion between extracellular matrix proteins and BASBO11 proteins that mediate tissue damage, or to block the normal progression of pathogenesis in infections initiated other than by implanting of indwelling devices or by other
                                                                                                                                                                                              polypeptides from Moraxella catarrhalis used to treat the infection
                                                                                                                                                                                                                                                                                                         This sequence represents a BASB011 protein from Moraxella catarrhalis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        249 GNSGGALVDANGALIGINTAIYSRSGGSMGIGFAIPNQIVQQVMTSLITTGKVSRGWMGI 308

                                                                                                                                                                                                                                                                                                    The polypeptide is used to generate an immune response in an animal, infection. A gainst a bacterial infection, e.g. a Moraxella catarrhalis infection. M. catarrhalis is present in 18% of childhood middle ear infections in the US. Molecules of the invention may also be used to prevent adhesion of bacteria to extracellular matrix proteins on indwelling devices or in wounds, to block bacterial adhesion between extracellular matrix proteins and BASBOII proteins that mediate tissue damage, or to block the normal progression of pathogenesis in infections initiated other than by implanting of indwelling devices or by other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            BASB011; immune response; bacterial infection; middle ear infection;

                                                                                                                                                       sequence. P. aeruginosa is an opportunistic human pathogen present in soll water and plants. The specification describes virulence polypeptides and nucleic acid sequence enopound which is capable of decreasing the expression of a pathogenic virulence factor. Compounds that inhibit the expression or activity of virulence factor polypeptides can be used to treat pathogenic infections, especially where the infection is a P. aeruginosa infection. especially where the infection note: the sequences given in the specification were poorly legible, and in some instances assumptions were made as to the identity of the residue; it is therefore possible that the sequence given below is

Outer membrane protein Hin47 (AAR92690) of H. influenzae SB33 is reported to be an Adhesin, and is conserved among strains of H. influenzae. For Hin47 to be used in vaccines, its protease activity must be decreased to prevent degradation of other antigens. This was performed by site-directed mutagenesis of the hin47 gene (AAT10423). Hin47 analogues in which e.g. Ser197 was replaced by Ala, Cys or Thr, His91 by Ala, Lys or Arg, or Asp121 by Ala were produced by transformed host cells. The analogues had less than 10% of the protease activity of native Hin47. They can also be used to raise antibodies and as carriers in prodn. of conjugate vaccines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                RITK-DNLPTIKFSDSNDISVGDLVFAIGNPFGVGESVTQGIVSALNKS-GIGINSYENF 121

Throtease Do is essential for survival of Escherichia coll at high

temperatures: its identity with the htra gene product.";

Blochem. Blophys. Res. Commun. 176:730-736(1991).

-I FUNCTION: SERINE PROTEASE THAT IS REQUIRED AT HIGH TEMPERATURE.

INVOLVED IN THE DEGRADATION OF DAMAGED PROTEINS: IT CAN DEGRADES

COLLICAR ALCATION: PRAY SHOCK.

-I SUBUNIT: MULTIMERIC.

-I SUBUNIT: MULTIMERIC.

-I SUBULIARIZES AND GLOBIN. SHARED SPECIFICITY WITH DEGQ.

-I INDUCTION: BY HEAT SHOCK.

-I INDUCTION: BY HEAT SHOCK.

-I MISCELLANEOUS: HTRA IS INDISPENSABLE FOR BACTERIAL SURVIVAL AT

TEMPERATURES ANDONE 42 DEGREES CELSIOS.

-I SIMILARITY: CHATAINS 2 PDZ/DHR DOMAINS.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
